BATTLE

Important! A battle rule that *often* gets overlooked, as stated in the Memoir '44 manual on page 8, is as follows:

-----8<-----8<-----8<-----8<-----8<-----8<-----

“A unit *adjacent* to an enemy unit *must* Close Assault this unit if it chooses to battle. It may *not* fire on another, more distant, enemy unit instead.”

-----8<-----8<-----8<-----8<-----8<-----8<-----

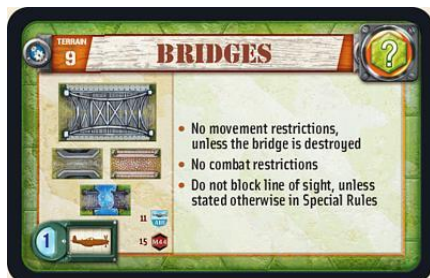

Q. Does the player have to *select* the units he/she will *battle*, when *ordering* their units, *before* the movement and battle phases of the game?

A. No. The player chooses the units to *battle* when the attacking unit is ready to roll the battle dice.

Q. Does a unit have to Close Assault an enemy unit in the battle phase *if* the unit starts its movement phase *adjacent* to the enemy unit, therefore, preventing the unit from moving during the movement phase?

A. No.

Line of Sight:

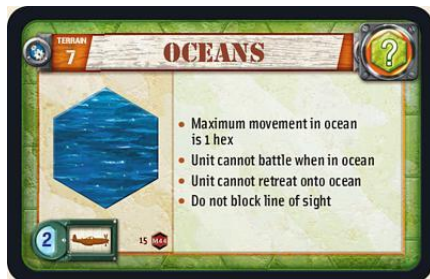

Q. Does a Bridge block “line of sight”?

A. No.

Q. Is “line of sight” blocked when targeting an enemy unit along the *edge* of the “half hexes”, on the side of the game board, if the full hex beside it is a type of terrain that blocks “line of sight” *or* the full hex is occupied by another unit?

A. Yes.

Retreat:

Q. Can a unit retreat through *any* terrain hex *regardless* of that terrain’s effects on movement?

A. Yes. However, if the unit is *forced* to retreat through terrain that is *impassable* (ex. an Ocean hex), the unit *must* lose a figure from the unit, for *each* retreat flag rolled, instead.

Q. Can a unit choose *not* to ignore a retreat flag, rolled on the battle dice, *if* the player is instructed that he/she “*may* ignore the first flag”?

A. Yes. However, a unit is *forced* to ignore a retreat flag *if* the player is instructed that he/she “*must* ignore the first flag”.

Q. Can a unit that is *forced* to retreat 2 hexes, move to a hex on *either side* of the hex the unit occupies (i.e. lateral move) and *then* move to a hex towards the retreating player’s side of the game board?

A. No. The unit *must* move towards the retreating player’s side of the game board.

Q. A Bunker ignores the first retreat flag rolled against it; however, the Air Power and Barrage Command Cards state that retreat flags can *not* be ignored. Therefore, does a unit in a bunker that has a retreat flag rolled against it, using the Air Power or Barrage Command Card, have to retreat?

A. Yes.

Q. An Artillery unit in a Bunker ignores the first retreat flag rolled against it and *must* take a hit (i.e. remove an Artillery figure from the Bunker in question) for the second and *each* successive retreat flag rolled against it because an Artillery unit can *not* retreat from a Bunker. Therefore, does the Air Power and Barrage Command Cards, which state that retreat flags can *not* be ignored, cause the Artillery unit in the Bunker to take a hit on the first retreat flag?

A. Yes.

Taking Ground:

Q. Can a unit Take Ground beyond its normal movement capacity? For example, a *Special Forces* Infantry unit, which can *only* move 2 hexes, moves 2 hexes, performs a successful Close Assault and Takes Ground resulting in a movement of 3 hexes.

A. Yes. Any movement that occurs in Battle (i.e. Taking Ground and Armor Overrun) is *always* in *addition* to a unit’s normal movement capacity.

Q. Can an Armor unit, which can *only* move 3 hexes and does move 3 hexes *and* performs a successful Close Assault *and* Takes Ground (i.e. 4 hexes moved), perform a successful Armor Overrun *and* move an additional hex and *not* battle, for a total movement of 5 hexes?

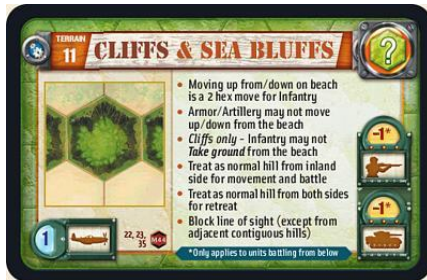

A. Yes, *however*, the movement and battle restrictions for the type of terrain and obstacles *still*

apply when Taking Ground and performing an Armor Overrun!

Examples of Taking Ground based on Terrain Type:

Beaches: No combat restrictions. A unit may still Take Ground after a successful Close Assault. An Infantry or Armor unit can Take Ground (i.e. move a third hex) when performing a successful Close Assault on a Beach hex. In this instance, the Armor unit can perform an Armor Overrun (i.e. battle a second time) if it makes a successful Close Assault on a Beach hex.

Cliffs & Sea Bluffs: An Infantry unit that performs a successful Close Assault with an enemy unit on a Sea Bluff hex, may Take Ground (i.e. move a third hex) up the Sea Bluff even though the Sea Bluff is a 2 hex move (ex. the First Assault Wave (Omaha Beach) and Point-du-Hoc scenarios); however, an Infantry unit that performs a successful Close Assault with an enemy unit on a Cliff hex, can *not* Take Ground up

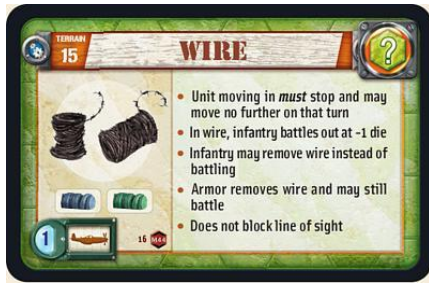

the Cliff!

Forests / Towns & Villages: An Infantry or Armor unit that performs a successful Close Assault with an enemy unit on a Forest or Town & Village hex may Take Ground (i.e. move a third hex) but *not* battle per terrain rules.

Hedgerows: An Infantry or Armor unit that performs a successful Close Assault with an enemy unit on a Hedgerow hex can Take Ground (i.e. move a third hex) *only* if it *started* adjacent to the Hedgerow hex and can *not* battle per terrain rules.

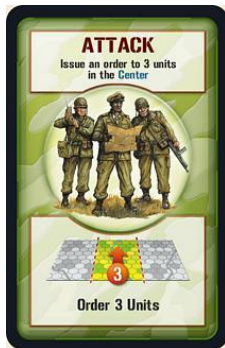

Wire: A unit that enters a hex with Wire must stop and **can not move any further on that turn**. An Infantry or Armor unit can Take Ground (i.e. move a third hex) when performing a successful Close Assault on a unit *occupying* a Wire hex. In this instance, the Armor unit can perform an Armor Overrun (i.e. battle a second time) and battle per terrain rules although it can *not* Take Ground a second time on performing a second successful Close Assault. An Armor unit can *not* Take Ground *after* moving *onto* a Wire hex *and* performing a successful Close Assault.

Q. Does the Ambush Command Card *allow* a unit to Take Ground in the event the targeted unit is *forced* to retreat or is eliminated?

A. No. The Memoir '44 manual on page 11 clearly states that a unit may Take Ground when *ordered*. Only a player who is *ordering units on his turn* may Take Ground during that turn. Therefore, the Ambush Command Card does *not* allow a unit to Take Ground because the unit is *not* being ordered by the player *on his turn*.

COMMAND CARDS

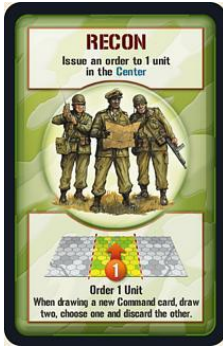

Q. If a player is unable to use *any* of his/her Command Cards because he/she does *not* have *any* units in the sections indicated by the Command Cards, does he/she discard a Command Card and end their turn without performing an action?

A. Yes. In fact, a player *may* use a section Command Card for a section where the player has *no* units, even if the player *could* use a different Command Card in a section with units, and discard the Command Card without taking *any* action and ending their turn.

Q. When a Command Card provides 1 additional battle die for an Armor unit and the Armor unit performs a successful Close Assault and then proceeds to perform an Armor Overrun, can the Armor unit *still* use 1 additional battle die for the Armor Overrun?

A. Yes.

Q. In the Pegasus Bridge scenario, if an Axis player uses the Recon Command Card on his/her first *or* second turns, how many Command Cards should he/she draw at the end of his/her turn? For example, the Axis player draws 2 Command Cards for his/her hand at the start of the game. On the Axis player's first *or* second turn, he/she uses the Recon Command Card which allows the Axis player to draw 2 Command Cards and discard 1 of them at the end of his/her turn. However, the Axis player will *also* be drawing 2 Command Cards at the end of his/her turn as indicated by the scenario briefing.

A. Perform the following steps:

1. Draw 2 Command Cards as indicated on the Recon Command Card.
2. Discard 1 of the drawn Command Cards as indicated on the Recon Command Card.
3. Draw a second Command Card as indicated by the scenario briefing.

Q. There are Tactic Command Cards that state, "If you do not command any <place name of unit type here> (ex. Infantry) units, issue an order to 1 unit of your choice." Can I choose the unit and apply the Command Card's effect to *that* unit?

A. No. You can order 1 unit *in any section* on the game board *only* for the purposes of normal movement and battle.

Q. Can the Air Power, Barrage and Firefight Command Cards be used against a unit that is camouflaged?

A. No. You can *only* battle a camouflaged enemy unit in Close Assault (i.e. the attacking unit occupies a hex *adjacent* to the targeted unit). The Air Power, Barrage and Firefight Command Cards can *not* battle a camouflaged enemy unit because these Command

Cards do *not* perform their actions in Close Assault.

Ambush:

Q. Does the Ambush Command Card apply to *all* enemy units *ordered* to perform a Close Assault or does it apply to *only* the single enemy unit that was *ordered just before* the Ambush Command Card was played?

A. The Ambush Command Card *only* applies to a single enemy unit that was *ordered just before* the Ambush Command Card was played.

Q. Once a player has played the Ambush Command Card and battled his/her opponent, can the opposing unit *still* battle *even* if that unit

was *forced* to retreat during the “ambush”?

A. No. A unit that retreats *out of* a hex may *never* attack back *even* if it retreats *and* is still adjacent to the enemy unit. However, if the unit being “ambushed” is *unable* to retreat as a result of a *blocked* retreat path, it *must* lose a figure from the unit for *each* retreat flag rolled. Therefore, it did *not* retreat *out of* the hex and may attack back.

Q. How is the Ambush Command Card played by a US Marine Corps Infantry unit that is permitted to “order 1 more unit” than its normal command capacity?

A. Only a player who is *ordering units on his turn* may “order 1 more unit” than the unit’s normal command capacity. Therefore, the Ambush Command Card does *not* allow the US Marine Corps Infantry

unit to “order 1 more unit” because the unit is *not* being ordered by the player *on his turn*.

Armor Assault:

Q. The Armor Assault Command Card provides Armor units with 1 additional battle die in Close Assault. If an Armor unit performs a successful Armor Overrun which leads to a second Close Assault, does the Armor Unit still receive 1 additional battle die for this Armor Overrun?

A. Yes.

Behind Enemy Lines:

Q. Can an Infantry unit move 3 hexes on beach hexes, which are limited to a 2 hex move, when ordered using the Behind Enemy Lines Command Card?

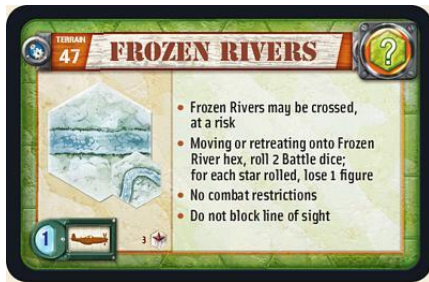

A. The *original* intent of the Command Card was that an Infantry unit’s *movement* would *not* be restricted by terrain although a terrain’s battle die reduction *would* still apply for the unit. The Command Card should read, “Terrain movement restrictions are ignored. Terrain battle restrictions still apply.” (revised Command Card image included at left). Therefore, terrain that costs *more than* 1 movement will *only* cost 1 move when an Infantry unit is *ordered* using the Behind Enemy

Lines Command Card. For example, moving *onto* a Bluff hex *from* a Beach hex is a 2 hex move for an Infantry unit in the First Assault Wave (Omaha Beach) scenario. Using the Behind Enemy Lines Command Card, moving up *onto* a Bluff hex *or* down *from* a Bluff hex would *only* cost a 1 hex move for an Infantry unit.

Q. Do Infantry units ignore Minefields when ordered using the Behind Enemy Lines Command Card (i.e. does *not* roll battle dice)?

A. Yes.

Q. Do Infantry units ignore Frozen River hexes when ordered using the Behind Enemy Lines Command Card (i.e. does *not* roll battle dice)?

A. Yes.

Close Assault:

Q. If a unit is ordered to perform a Close Assault against an *adjacent* enemy unit and, as a result of battle, the enemy unit is no longer *adjacent* to the unit, can the unit still battle?

A. No. The ordered units *must* perform a Close Assault.

Q. If an enemy unit retreats, as a result of battle, and that retreat puts it next to a unit that was *not* adjacent to an enemy unit and, therefore, was *not* ordered, can that unit perform a Close Assault against the enemy unit?

A. No. *Only* ordered units may perform a Close Assault.

Counter-Attack:

Q. Can you use the Counter-Attack Command Card to *counter* another Counter-Attack Command Card?

A. Yes.

Q. Can you draw 2 Command Cards and discard 1 of them when you *counter* the Recon Command Card?

A. Yes. The *entire* effect of the card is duplicated!

Q. When using the Counter-Attack Command Card to *counter* an opponent's Air Sortie Command Card that was played *together* with a Section Command Card, the Counter-Attack Command Card *only* counters the Section Command Card and *not* the Air Sortie Command Card as stated in the Air Pack manual on page 4. However, can the Air Sortie Command Card, which is face up in front of the

player who is playing the Counter-Attack Command Card, be played *together* with that Counter-Attack Command Card?

A. Yes.

Dig-In:

Q. Are there any restrictions to placing Sandbags?

A. No. Sandbags may be placed on *any* hex including a hex with a Bridge. Sandbags on a hex with a Bridge or a hex *without* terrain will reduce the number of battle dice rolled by 1 when Infantry or Armor is attacking. Sandbags on a hex *with* terrain *only* allow a unit to ignore the first retreat flag rolled against it because battle die reductions in the same hex are *not*

cumulative.

Q. If the battle die reductions are *not* cumulative (ex. when a Sandbag is placed on a Forest hex, which already provides a battle die terrain reduction of -1, the Sandbag does *not* add its battle die reduction of -1), what is the benefit of placing Sandbags on terrain that already has battle die reductions?

A. The unit occupying the terrain with a Sandbag ignores the first retreat flag.

Q. The “Dig-In” card states, “Issue an order to 4 Infantry units. The units improve their position by ...” Can you move and battle with the unit in addition to placing Sandbags?

A. No. You can *only* place the Sandbags.

Q. The “Dig-In” card states, “... placing an *available* sandbag ...” What is meant by an *available* Sandbag?

A. The term *available* indicates you are limited to the 12 Sandbag pieces of the game regardless of their color. Therefore, if you run out of the right color Sandbags for your units (ex. green for Allies *or* purple for Axis), simply use the other coloured Sandbags instead.

Firefight:

Q. The Firefight Command Card allows units to battle with 1 additional battle die. Can Infantry units battle with “4,3,2,1” *or* are these units limited to the same battle range and, therefore, battle with “4,3,2”?

A. The battle range is *not* extended and, therefore, an Infantry unit battles with “4,3,2”.

Infantry Assault:

Q. Can I use the Infantry Assault Command Card for a *section* that has *no* Infantry units and then order 1 unit of my choice?

A. No. The Infantry Assault Command Card states, "If you do *not* command *any* Infantry units, issue an order to 1 unit of your choice." If you command an Infantry unit in *any* section of the game board, you can *not* choose to order 1 unit of your choice.

Their Finest Hour:

Q. Does the grenade symbol on the battle dice allow you to order an Artillery unit?

A. No. An Artillery unit can *only* be ordered by rolling the star symbol on the battle dice. The star symbol on the battle dice allows you to order *any* unit which *can* include an Artillery unit.

Q. Does an Airplane ordered by the Their Finest Hour Command Card roll 1 additional die in battle?

A. Yes. The Airplane rolls 1 additional die in *any* Special Action that involves dice rolling (ex. Strafing, Kamikaze Attack, etc.).

MISCELLANEOUS

Additional Airdrop (Sainte-Mère-Église):

Q. Are all four Infantry figures dropped at the same time?

A. Yes. Place the Infantry figures in your hand, close and position your hand, facing down, about 12" above the game board and then open your hand. The Infantry figures should all drop at *approximately* the same time.

Q. If 2 Infantry figures drop into the same hex, are both of those figures *out of action*?

A. Yes. If any part of an Infantry figure is *off* the game board and also on a hex *or* on the same hex as a figure and also on a hex with no other figure, the Infantry figure is *out of action*.

Q. What part of the Infantry figure determines which hex it will occupy?

A. If an Infantry figure lands in *more* than 1 hex, the player may choose *any* of those hexes in which to place the unit. However, if the Infantry figure lands off the game board and in a hex *or* partially in a hex with a figure, it is *out of action*.

Memoir '44 Scenario Editor – Days of Wonder Website:

Q. Can Memoir '44 scenarios, that are created using the Memoir '44 Scenario Editor, be posted on other web sites?

A. Yes.

RULES

Air Rules:

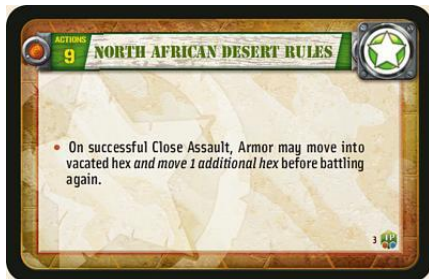

Q. What is the Air Check value for a hex *without* terrain (ex. countryside, desert and winter)?

A. A hex *without* terrain does *not* roll *any* battle dice for an Air Check Roll (i.e. a hex *without* terrain has an Air Check value of “0”); however, the opponent still performs an Air Check by rolling battle dice for his/her adjacent enemy units.

Q. Are terrain *and* obstacle Air Check values cumulative? For example, does Sandbags, which have an Air Check value of 1, located on a Forest hex, which has an Air Check value of 2, *add* their Air Check values together for a total Air Check value of 3?

A. No. Air Check values for terrain *and* obstacle reductions are *not* cumulative! The final Air Check value would use the *highest* value. For example, using the same scenario indicated in the question, the Air Check value for the Forest hex with Sandbags would be 2 because the Forest hex has the *highest* Air Check value. However, the opponent still rolls *additional* battle dice for his/her adjacent enemy units.

North African Desert Rules:

Q. When using the North African Desert Rules, if an Armor unit performs a successful Close Assault against an enemy unit and *then* Takes Ground by moving 1 *or* 2 hexes and performs *another* successful Close Assault against an enemy unit, can the Armor unit move *another* 2 hexes?

A. No. An Armor unit can *only* move 1 or 2 hexes after the *first* successful Close Assault.

Overlord Rules:

Q. As stated in the Overlord rules on page 3, the Commander-in-Chief selects *either* 1, 2 *or* 3 Command Cards from his hand and gives those Command Cards to the Field Generals. However, there are some Command Cards that can *only* be played by the Commander-in-Chief (ex. the Air Power, Barrage and Their Finest Hour Command Cards). Therefore, can the Commander-in-Chief distribute 3 Command Cards to the Field

Generals *in addition to* playing a Command Card that can *only* be played by the Commander-in-Chief?

A. No. The Commander-in-Chief and/or Field Generals may *only* play a *maximum* of 3 Command Cards *total*. Also, the Commander-in-Chief *must* play a Command Card, that can *only* be played by the Commander-in-Chief (ex. the Barrage Command Card), *before* the Field Generals.

Russian Command Rules:

Q. Can the Air Sortie Command Card, that is face up in front of the player, be played *together* with a Section Command Card under the Commissar Chip?

A. Yes.

Q. When using the Russian Command Rules, can a Section Command Card be played, from the Russian player's hand, *together* with the Air Sortie Command

Card that is face up next to that player?

A. Yes; however, the Section Command Card *must* be the Recon Command Card!

Q. Can a Section Command Card be played *together* with the Air Sortie Command Card that is under the Commissar Chip?

A. No. The Air Sortie Command Card can *not* be placed under the Commissar Chip. The Air Sortie Command Card is *always* placed face up in front of the player and does *not* count towards the player's total set of Command Cards.

Q. Can the Air Sortie Command Card be played *instead of* the Command Card under the Commissar Chip?

A. Yes. The Command Card remains under the Commissar Chip for this turn *just as if* the Recon Command Card was played from the Russian player's hand.

SCENARIOS

Eastern Front:

Q. The scenario briefings for Eastern Front scenarios list the players as *either* an "Axis Player" or "Russian Player" *except* for the Suomussalmi (Russo-Finnish War) scenario which lists the players as *either* a "Finnish Player" or "Russian Player". Therefore, is it assumed that the "Finnish Player" in the Suomussalmi (Russo-Finnish War) is considered an "Axis Player" and the "Russian Player", for all Eastern Front scenarios, is considered an "Allied Player"?

A. Yes. For all intents and purposes, the "Finnish Player" is an "Axis Player" and the "Russian Player", for all Eastern Front scenarios, is an

“Allied Player”. For example, if the Air Power Command Card is played by the “Russian Player”, that player would roll 2 battle dice per hex as indicated on the Air Power Command Card for an Allied air attack.

Bug River (Unternehmen Barbarossa):

(See *Obstacles: Trains – Locomotive and Wagon* for further details)

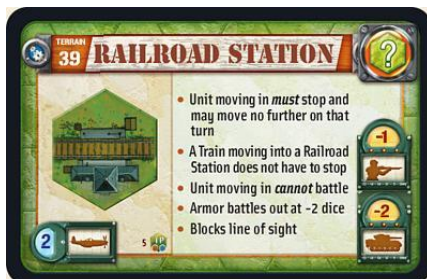

Q. Do the Russians control the Supply Train and, therefore, the Locomotive and Wagon are *each* “loaded” with a Russian Infantry unit?

A. Yes.

Q. Can the Russian Armor units move *out* of the Field Bunkers?

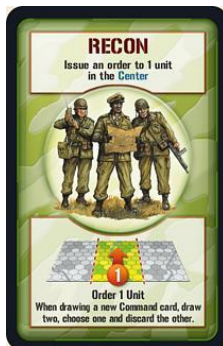

A. No. The Russian Armor units are treated *like* an Artillery unit in a Bunker for the purposes of movement.

Q. It is assumed that if the Locomotive and/or Wagon are removed, the Infantry unit *occupying* that portion of the Supply Train is *also* removed. If the *entire* Supply Train is removed *before* reaching the Railroad Station, does the attacking player *only* receive 1 Victory Medal *even though* the Supply Train was carrying 2 Infantry units?

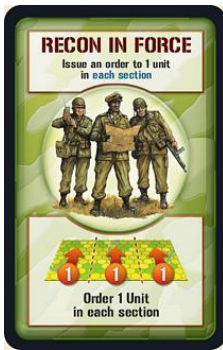

A. Yes. However, if either the *entire* Supply train or Locomotive reaches a Railroad Station *before* being removed, the *remaining* Infantry units are placed on the hexes *adjacent* to the Locomotive and Wagon (if applicable). The Infantry units can *now* be eliminated in order to earn a Victory Medal.

Counter-attack on Mortain (Unternehmen Lüttich):

Q. If an Allied player uses the Recon Command Card as an Air Power Command Card, does the player still draw 2 Command Cards and discard 1 of them as stated in the Recon Command Card description?

A. No. The Recon Command Card is played *exactly* like the Air Power Command Card.

Q. Can the Recon In Force Command Card also be played as the Air Power Command Card *just as if it was* the Recon Command Card?

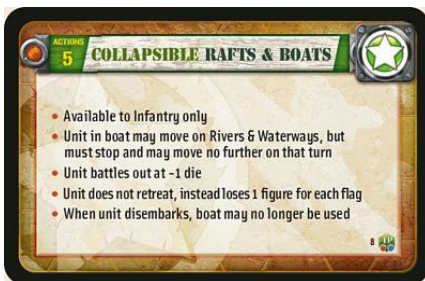

A. No.

Q. Can an opposing player use the Counter-Attack Command Card to *counter* the Recon Command Card that I played *as* the Air Power Command Card in this particular scenario?

A. No. The Counter-Attack Command Card would *counter* the Recon Command Card and *not* the Air Power Command Card because the scenario briefing states that *only* an Allied player may play his/her Recon Command Card *as* the Air Power Command Card *so long as* an Allied unit occupies one of the Hill 317 hexes. An Axis player can *not* meet these conditions and, therefore, can *not* use the Recon Command Card *as* the Air Power Command Card.

Nijmegen Bridges (Market Garden):

Q. Can the Allied Infantry unit on the left flank, with the collapsible, flat-bottom boats, capture the Railroad Bridge while occupying an *adjacent* River hex?

A. No. The Allied Infantry unit can *not* directly move *onto* the Railroad Bridge from a River hex and *must* exit the River hex and move *onto* the Railroad Bridge *from* a Road hex.

St. Vith (Ardennes):

Q. The scenario states, "The hill slope *toward* St. Vith is impassable." This indicates that units on the St. Vith side of the designated Hill hexes are *not* able to move through the Hill hexes. Does it also mean that units approaching St. Vith on the *other* side of the Hill hexes are *not* able to move through the designated Hill hexes *toward* St. Vith?

A. Yes. The designated Hill hexes are impassable

both ways.

TERRAIN

Q. Do battle die reductions *cancel* each other out when attacking from hexes with terrain and obstacles that provide battle die reductions? For example, if a unit on a Forest hex is attacking an *adjacent* unit on a Forest hex, do you apply the *terrain* battle die reductions for *each* battle in this situation *or* do they *cancel* each other out and are ignored for *each* battle.

A. The battle die reductions still apply and are used for *each* battle *regardless* of the terrain the opposing unit occupies. Therefore, an attacking Infantry unit on a Forest hex would battle with a -1 battle die reduction against an adjacent Infantry unit on a Forest hex for *each* battle.

Airfields:

Q. What is considered a “friendly” Airfield?

A. Any Airfield hex that is *not currently occupied* by an enemy unit.

Q. If an Airfield is made up of one or more contiguous hexes, can an Airplane land on a *vacant* Airfield hex *even* if “friendly” units occupy one or more of the *other* contiguous Airfield hexes?

A. Yes; however, an Airplane can *not* land on a vacant Airfield hex if *enemy* units occupy one or more of the *other* contiguous Airfield hexes!

Beaches:

Q. If an Armor unit moves 2 hexes through clear terrain, can it move *onto* a Beach hex as its third hex of movement?

A. No. A unit that moves *onto* a Beach hex can *only* move 2 hexes *total* during the movement phase of that turn. However, the same unit may Take Ground as a result of battle and gain an additional hex of movement. Here are some movement examples:

- An Armor unit that moves *from* an Ocean hex *to* a Beach hex (i.e. a 1 hex move) can *only* move 1 more hex this turn.
- An Armor unit that moves *from* a Beach hex *to* a Beach hex (i.e. a 1 hex move) may move *onto* a hex without terrain (i.e. a total movement of 2 hexes) and *must* stop. As a result, the Armor unit is forced to *forfeit* its remaining 1 hex movement for this turn.
- An Armor unit that moves *from* a hex without terrain *to* a Beach hex (i.e. a 1 hex move) may move *onto* another Beach hex (i.e. a *total* movement of 2 hexes) and *must* stop. The Armor unit can *only* move 2 hexes once the unit *enters* a Beach hex.

Cliffs & Sea Bluffs:

(See *Command Cards: Behind Enemy Lines* for further details)

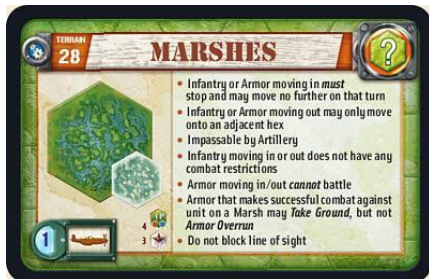

Q. What are the general rules for Cliffs & Sea Bluffs?

A. Cliffs & Sea Bluffs have the following rules unless *specifically* indicated by a scenario briefing or special rule:

- An Infantry unit moving *up from* a Beach hex *onto* a Cliff or Sea Bluff hex *or* moving *down from* a Cliff or Sea Bluff hex *onto* a Beach hex is a 2 hex move.

- A Cliff or Sea Bluff hex is treated as a Hill hex for *all* battle purposes *and* when moving units *onto* or *from* the Cliff or Sea Bluff hex *into* inland terrain (i.e. terrain that is *leading up to* the edge of the Cliff or Sea Bluff)
- Armor and Artillery units can *not* move *up from* a Beach hex *onto* a Cliff or Sea Bluff hex *or* move *down from* a Cliff or Sea Bluff hex *onto* a Beach hex. However, Armor and Artillery units may move *onto* a Cliff or Sea Bluff hex *from* inland terrain.
- A Cliff or Sea Bluff hex is treated as a Hill hex when *any* unit is forced to retreat either *down from* the Cliff or Sea Bluff hex *onto* a Beach hex or *up from* a Beach hex *onto* the Cliff or Sea Bluff hex.
- An Infantry unit may Take Ground *from* a Beach hex *onto* a Sea Bluff hex; however, an Infantry unit can *not* Take Ground *from* a Beach hex *onto* a Cliff hex!
- A Cliff or Sea Bluff hex can *never* be a 3 hex move *even* if *specifically* indicated by a scenario briefing or special rule.

Marshes:

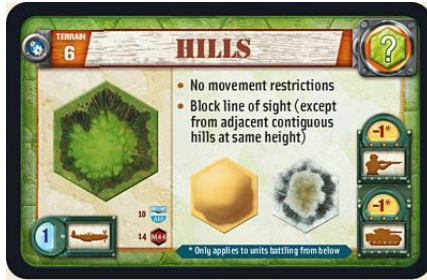

Q. The Terrain Pack manual states on page 4, “An Infantry or Armor unit that moves *onto* a Marsh hex *must stop* and may *not* move further on that turn. A unit that *leaves* a Marsh hex may *only* move *onto* an adjacent hex.” The same movement restrictions apply to Flooded Fields as stated in the Terrain Pack manual on page 4. Therefore, can an Infantry or Armor unit move from *one* Marsh / Flooded Field hex to *another*

Marsh / Flooded Field hex *without* any movement restrictions?

A. No. A unit moving *onto* or *leaving* a Marsh hex, regardless of the terrain being moved into, *must stop* on the *adjacent* hex and can *not* move further on that turn. Therefore, an Infantry or Armor unit can *only* move 1 hex per turn while traversing Marshes and Flooded Fields.

Hills:

Q. Does an Infantry or Armor unit located on a Hill hex have “line of sight” over a hex with terrain (ex. a Forest, Hedgerow or *even* another Hill hex) that blocks “line of sight”, or that is occupied by a unit (ex. Infantry) which blocks “line of sight”, to a *lower* hex (i.e. *not* another Hill hex)?

A. No.

Q. Does an Infantry or Armor unit located on a Hill hex have “line of sight” over a hex with terrain (ex. a Forest or Hedgerow hex but *excluding* a Hill hex) that blocks “line of sight”, or a unit (ex. Infantry) which blocks “line of sight”, *if* the target unit is *also* on a Hill hex?

A. No. Hill hexes are the *only* type of terrain that does *not* block “line of sight” *if* a unit occupying a Hill hex targets a unit on *another* Hill hex *when* there are other Hill hexes in between the units in question (i.e. plateau effect).

HQs & Supply Tents:

Q. As stated in the Pacific Theatre manual on page 5, under the Special Rules for HQ & Supply, the player *must* “reclaim” his/her HQ - Supply Tent in order to draw a Command Card to restore his/her hand to its original Command Card capacity. What action needs to be performed in order to “reclaim” the HQ & Supply Tent hex?

A. Unless *specifically* indicated by a scenario briefing or special rule, it is considered best, for the sake of rule simplicity, to consider an HQ & Supply Tent hex “reclaimed” once the enemy unit has *either* retreated or been eliminated from the HQ & Supply Tent hex. It is *not* necessary for a “friendly” unit to *physically* move *onto* the HQ & Supply Tent hex in order to “reclaim” the HQ & Supply Tent hex.

Mountains:

Q. What are the general rules for Mountains?

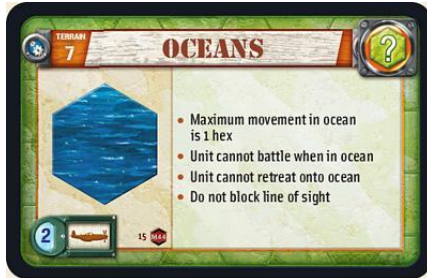

A. Mountains have the following rules unless *specifically* indicated by a scenario briefing or special rule:

- A Mountain hex is the *highest* level of terrain and it is on a *higher* level than Hill hexes.
- An Infantry unit located on a Mountain hex does *not* have “line of sight” over a hex with

terrain (ex. Forest, Hedgerow or Hill hex) that blocks “line of sight”, or a unit (ex. Infantry) which blocks “line of sight”, to *any* other hex *including another Mountain hex*! Therefore, an Infantry unit located on a Mountain hex can *only*

battle an enemy unit *if* the enemy unit is 1) *adjacent* to the Mountain hex, 2) located on a Mountain hex with other Mountain hexes in between (i.e. plateau effect) *or* 3) located on a hex that does *not* have *any* terrain that blocks “line of sight” between itself and the targeted Mountain hex.

Oceans:

Q. Can *any* unit *move*, *not* retreat, from a Beach hex *onto* an Ocean hex?

A. Yes! A unit may move *onto* an Ocean hex from a Beach hex *or* move *onto* an Ocean hex from *another* Ocean hex.

Power Plants:

Q. What are the terrain effects for a Power Plant hex?

A. The Power Plant hex has the same effect as a Town & Village hex *in addition to* the effects indicated in the Terrain Pack manual on page 11.

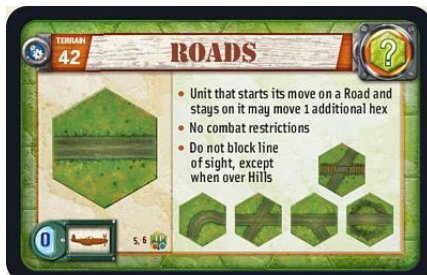

Prison Camps:

Q. What are the terrain effects for a Prison Camp hex?

A. The Prison Camp hex has the same effect as a Town & Village hex *in addition to* the effects indicated in the Terrain Pack manual on page 11.

Roads (on a Hill):

Q. Does the Road on a Hill hex have the same “line of sight” and terrain battle die reductions as a standard Hill hex?

A. No. The Road on a Hill hex *only* blocks “line of sight”.

UNITS

Airplanes:

Q. Can an Airplane “fly” (i.e. move) through *another* Airplane’s hex?

A. Yes. An Airplane may move through *any* hexes that are occupied by *any* terrain *or* unit but the Airplane must *end* its movement on a hex that is *not* occupied by *any* unit.

Q. Are *any* Command Cards drawn when ordering the Storch to perform a Recon Special Action with *only* the Air Sortie Command Card?

A. No. In order to benefit from the Recon Special Action’s ability to draw 2 Command Cards and discard 1 of them, the Storch *must* be ordered by a Command Card *or* the Air Sortie Command Card played *together* with a Section Command Card.

Q. How many Command Cards are drawn when ordering the Storch to perform a Recon Special Action with the Recon Command Card?

A. Although the Recon Command Card allows the player to draw 2 Command Cards and discard 1 of them, this action is *not* permitted to be used *together* with the Recon Special Action and, therefore, *only* 2 Command Cards can be drawn and 1 of them

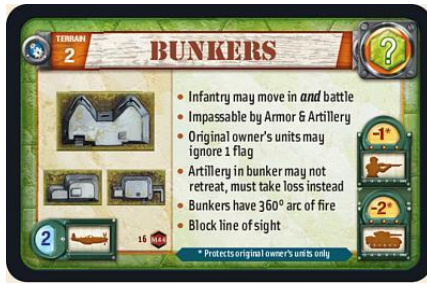

discarded.

Artillery:

Q. Does an Artillery unit ignore *all* terrain (Forest, Hills, etc.) and obstacles (Wire, Sandbags, etc.) when determining battle die reductions and “line of sight”?

A. Yes, unless *specifically* indicated by a terrain description, scenario briefing *or* special rule (ex. a Wadi terrain hex has a -1 battle die reduction for an *attacking* Artillery unit).

Q. Is an Artillery unit in a Bunker able to fire in *all* directions or is it limited to the direction in which the Bunker is facing?

A. An Artillery unit in a Bunker may fire in *all* directions.

Big Guns:

Q. Can a player move a Big Guns unit?

A. Yes. A Big Guns unit is treated the same as an Artillery unit for the purposes of movement.

Q. If a player moves a Big Guns unit, do the “targeting” cross-hair markers return to the Big Guns unit?

A. Yes.

Q. Can a Big Guns unit battle another enemy unit *without* the “targeting” cross-hair markers returning to the Big Guns unit from other enemy units that are currently targeted with cross-hair markers?

A. Yes, *unless* the “targeting” cross-hair markers are *no longer* available.

Infantry:

Q. What are the general rules for Combat Engineers?

A. A description of Combat Engineers is in the Terrain Pack manual on page 13 and the Eastern Front manual on page 6. Place a Special Forces or Combat Engineers badge in the same hex as these units in order to distinguish them from other units. The following points will better explain the use of the Combat Engineer unit:

- An Engineer unit moves *and* battles like a standard Infantry unit.
- If an Engineer unit performs a Close Assault, the *adjacent* enemy unit is *not* protected by the terrain it occupies and, therefore, the Engineer unit ignores *all* terrain battle die reductions.
- In order for an Engineer unit to remove Wire, it *must also* be able to battle. Therefore, it can *not* move 2 hexes, battle and remove Wire *unless* the Engineer unit is ordered by the Infantry Assault Command Card which allows it to move 2 hexes, battle and remove Wire *or* move 3 hexes, *not* battle and *not* remove Wire.
- If an Engineer unit moves *onto* a hex with a Minefield and the unit *can* battle, it *must* remove the Minefield piece from the game board, thereby “clearing” the Minefield, and can *not* battle. If the Engineer unit can *not* battle after moving *onto* a Minefield hex, the Minefield “detonates” and its effects are applied according to Minefield rules. If an Engineer unit is ordered by the Infantry Assault Command

Card, it may move 2 hexes, onto a hex with a Minefield, and clear the Minefield or move 3 hexes, onto a hex with a Minefield, and detonate the Minefield.

Q. A French Resistance Infantry unit “may disappear into the countryside, retreating up to 3 hexes instead of the standard 1 on *any* retreat flag rolled” as stated in the Memoir '44 manual on page 12. Does this mean a French Resistance Infantry unit can retreat 6 hexes instead of the standard 2 if 2 retreat flags are rolled and so on?

A. Yes. A French Resistance Infantry unit may retreat 1, 2 or 3 hexes for *each* retreat flag rolled against it and, therefore, could even retreat up to 9 hexes in the event that 3 retreat flags were rolled!

Q. Do Command Cards that order an Infantry unit to “battle with 1 additional die” *still* apply to Snipers?

A. Yes. The following Command Cards are applicable:

- Behind Enemy Lines
- Close Assault
- Firefight
- Their Finest Hour

Q. Do Snipers take a hit if the star symbol is rolled on the battle dice when using the Air Power Command Card?

A. Yes. Both a grenade *and* star symbol, rolled on the battle dice, is a hit, on a Sniper, when using the Air Power Command Card.
